

Analyzing Your Business: How do you know where you stand?

Wisconsin Custom Operators Conference
Howard Johnson-Antigua Bay Hotel
Wisconsin Dells, WI. Jan. 25-26, 2005

Kevin C. Dhuyvetter (kcd@ksu.edu --- 785-532-3527)
Terry L. Kastens (tkastens@ksu.edu --- 785-532-5866)

Department Agricultural Economics, Kansas State University

Knowing where your business stands ...

- **Benchmarking (internal and external)**
 - Internal benchmarking – how has your business been doing over time?
 - External benchmarking – how does your business compare with your competitors?
- **Without benchmarking it is difficult to know how your business might fare in the future**
 - Strengths of business to capitalize on
 - Weaknesses of business to improve upon

3

Benchmarking...

- **Businesses generally fail to adequately benchmark for one of two reasons**
 1. They don't know their own numbers (internal)
 2. They don't know averages (external)

Which is worse?

Some background information

4

Profit is not a zero sum game

- **If you make your clients profitable then you will be profitable**
- **So, you'd better know what makes your clients profitable**

5

Good Management

- **A well-managed firm is one that consistently makes greater profits than competing firms in the industry.**
- **In production agriculture, profitability has to do with persistently having higher profits than similarly structured neighboring farms.**
- **So, what management traits matter? What makes farmers more profitable than their neighbors?**

6

Study of ~1000 farms in KFMA at Kansas State University

Cost is a large driver of profit; technology matters; but also size and renting more

**Low- vs High-Profit Groups in Illinois
(1995-2000 average return – Source: University of Illinois)**

Trait/category	Low quartile	High quartile
Total acres	672	1,007
Owned	171 (25%)	74 (7%)
Share rent	311 (46%)	789 (78%)
Cash rent	190 (28%)	144 (14%)
Total costs (\$/A)	\$430	\$340
Land	133	98
Power	71	55
Buildings	23	19
Labor	50	30
Variable inputs	99	92
Other	54	46
Yield (bu/A)		
Corn	148	160
Soybeans	47	50
Prices (\$/bu)		
Corn	\$2.48	\$2.50
Soybeans	\$6.25	\$6.02

Annotations:
 - Red arrow between Total costs (\$/A) points from \$430 to \$340 with text "cost matters".
 - Red arrow between Variable inputs points from 99 to 92 with text "yield matters".
 - Red arrow between Corn yield points from 148 to 160 with text "price does not".

Difference between the High 1/3 and Low 1/3 farms ranked on return to management
Kansas Farm Management Association Enterprise Analysis
Nonirrigated Crops -- State Averages, 2001-2003

	(High 1/3 less Low 1/3)				
	Corn	Sorghum	Wheat	Soybean	Alfalfa
Number of farms	105	194	327	170	57
Enterprise acres	284	224	310	215	47

Mach/net returns	40.9%	31.2%	30.6%	33.4%	22.8%	32.2%

11

Why learn about machinery costs?

- **Selecting Profit-maximizing Crop Mix**
 - must prorate to crops
- **Dealing with Technological Change (no-till)**
 - alternative systems use machinery differently
- **Benchmarking**
- **Banking (tracking market value & deprec.)**
- **Minimizing Costs of Production**
 - owning vs. leasing vs. custom hire
 - optimal trade decisions
- **How do machinery costs impact revenue?**
 - **Is it any different for custom operators?**

12

Another reason to know your machinery costs ...

Relative machinery costs are somewhat repeatable

13

Machinery costs ...

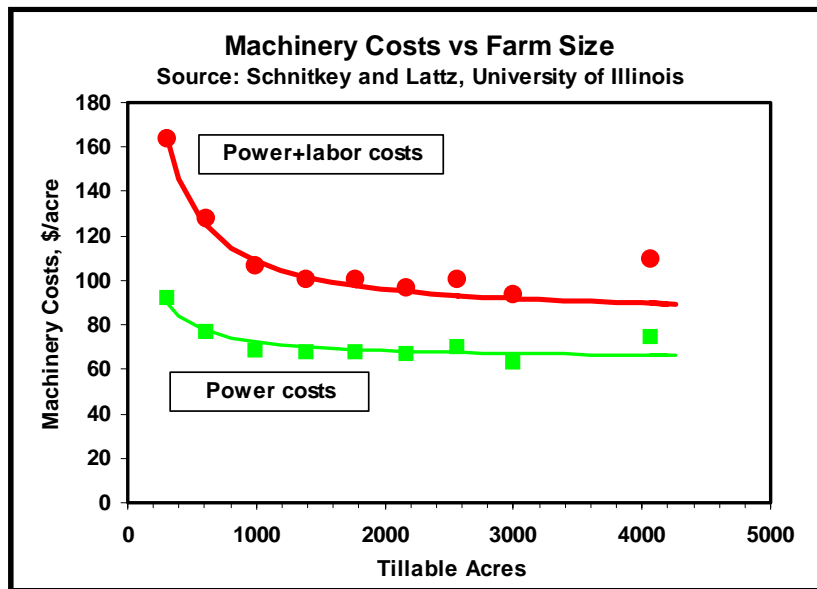

- Differences are important in explaining profitability differences
- Relatively persistent from year to year
- So why do some producers consistently have lower machinery costs?
 - Farm size
 - Management
 - ???

14

No large farms have high machinery cost

Pattern is very similar to Kansas data

Machinery costs are highly variable across farms ...

Kansas Farm Management Association Enterprise Analysis Nonirrigated Crops -- State Averages, 2001-2003						
	Corn	Sorghum	Wheat	Soybean	Alfalfa	
Number of Farms	105	194	327	170	57	
Average Acres						Total Ac
High profit farms	481	432	692	443	112	2,160
Mid profit farms	306	313	679	310	130	1,739
Low profit farms	196	208	382	228	66	1,080
Machinery Costs, \$/acre						Wtd Avg
High profit farms	\$54.32	\$42.85	\$47.58	\$50.04	\$61.30	\$49.35
Mid profit farms	\$60.73	\$51.68	\$49.26	\$60.38	\$76.77	\$55.76
Low profit farms	\$91.65	\$65.61	\$67.79	\$76.19	\$99.00	\$75.38
High less low, \$	-\$37.33	-\$22.76	-\$20.21	-\$26.16	-\$37.70	-\$26.03
High less low, %	-40.7%	-34.7%	-29.8%	-34.3%	-38.1%	-34.5%

19

Benchmarking ...

- Profitability (ROA, ROE) is the ultimate measure to benchmark
- Because cost is a big driver of profitability differences, benchmarking on costs is an important task when targeting improvement
- Discussion here will specifically relate to machinery costs and external benchmarking

20

Crop Machinery Investment, Kansas, 2003, \$/a

2003	as is /cropland	as is /crop	"if don't hire custom work"		\$custom-to-mkt investment factor
			/cropland	/crop	
NW	\$87	\$117	\$104	\$139	1.9
SW	\$90	\$135	\$106	\$159	1.7
NC	\$117	\$117	\$131	\$131	1.6
SC	\$123	\$128	\$141	\$147	1.9
NE	\$145	\$146	\$156	\$157	1.7
SE	\$149	\$130	\$164	\$143	1.8
KS	\$119	\$128	\$134	\$145	1.8

- People love to benchmark on machinery investment, but this should be done very cautiously
 - Level of operation or service provided differs
 - Investment is not necessarily a good indicator of cost
 - Benchmark units are not always the same (e.g., fallow acres)

21

Machinery cost categories

- Repair and maintenance
- Labor
- Depreciation (market, not tax depreciation)
- Interest (opportunity interest)
- Fuel and lubrication
- Taxes, insurance, and shelter
- Custom hire

22

Machinery Costs Per Acre, Kansas, 2001
 Source: 182 KFMA Members (Beaton)

Custom hire cost has been allocated to individual categories

Machinery Costs NW KS Wheat Enterprises

	<u>KFMA 95</u>	<u>Farm A 97</u>
Labor (hired & unpaid)	\$17.23	\$27.00
Gas/Fuel/Oil	\$ 6.03	\$ 7.57
Repair & Maintenance	\$11.43	\$ 9.19
Personal Property Tax	\$ 0.53	\$ 0.49
General Insurance	\$ 1.97	\$ 1.89
Utilities	\$ 1.69	\$ 1.48
Auto Expense	\$ 0.72	\$ 0.00
Economic Depreciation	\$ 8.71	\$12.91
Net Machine Hire	\$11.93	\$ 0.82
Interest (9% assign)	<u>\$ 8.97</u>	<u>\$11.40</u>
Total	\$69.21	\$72.75

Machine hire makes it hard to compare

**Machinery Costs NW KS Wheat Enterprises
combine tax, insurance, utilities; prorate auto expense
and machine hire**

	<u>KFMA 95</u>	<u>Farm A 97</u>
Labor (hired & unpaid)	\$21.08	\$27.31
Gas/Fuel/Oil	\$ 7.38	\$ 7.66
Repair & Maintenance	\$13.99	\$ 9.29
Tax, Insurance, Shelter	\$ 5.13	\$ 3.90
Economic Depreciation	\$10.66	\$13.06
Interest (9% assign)	<u>\$10.97</u>	<u>\$11.53</u>
Total	\$69.21	\$72.75

25

**Machinery Costs NW KS Wheat Enterprises
using custom rates (1997) approach**

	<u># operations</u>	<u>\$/operation</u>
Undercutter (V-Blade)	4	\$ 4.68
Offset Disk	1	\$ 4.38
NH3 Application	1	\$ 6.16
Drill	1	\$ 5.61
Harvest 40 bu.	1	<u>\$19.87</u>
Total		\$54.74

Where's the rest of the costs? Or, is this what they should be?

26

Research comparing whole-farm costs with custom rates...

- Custom rates are an important benchmark
- Based on KFMA database and cooperator surveys for the year 2001
- Compare actual costs with what they might be expected to be, where expectations are based on published custom rates
- Custom rate ratio = $\frac{\text{Actual costs}}{\text{Expected costs}}$

27

Relative custom rate ratio

28

Conclusions of this reserach

- Published custom rates need to be increased by approximately 25% (for a farm with 1,000 harvested acres)
- Economies of size exist (i.e., scale factor adjustment decreases as farm size increases)
- Thoughts...
 - Consider hiring it done
 - Consider the opportunity to do custom work
- Excel spreadsheet (*KSU-MachCost*) that can be used to estimate and benchmark farm specific machinery costs (at www.agmanager.info)

29

Implications for custom operators?

- It does appear many farms would be better off hiring farming operations rather than doing them in house
 - Is that really true?
- Are farms using more custom work today?
 - i.e., is the overall demand increasing?
- Are bigger or smaller farms hiring custom work?
 - Where is the best market segment?

30

Cus is relative custom hire intensity (cust hire / total crop expense).
 Custom hire doesn't of itself make you profitable.

Maybe a slight temporal increase in demand for custom hire . . .

- Some management features have showed trends over time related to big vs. small farmers
- Has that been true regarding custom hire?

33

Example of one factor that showed a very distinct trend across farm size

34

Example of one factor that showed a smaller trend across farm size

Small and large farms tend to spend more \$/acre in cust hire than avg size.

Additional thoughts on custom work

- **Doug Karre, Frenchman Valley Coop (Dec 8)**
 - Customers are small and big farms, not middle
 - Profitable in its own right; related seed and fertilizer sales is an added bonus
- **We're wondering. . .**
 - History showed cust hire by big and small farms
 - With increasing size-polarization of farms, the big and small will be all that's left – increased demand
- **Things to consider:**
 - Make custom services profitable in their own right
 - Not just machinery but also agronomic or other services
 - Keep thinking about bi-polarization

37

Make custom operations profitable in their own right ...

- Custom operations are very similar to farms in that returns are highly variable between operations and cost management is very important (rates charged tend to be very competitive)
- In order to be profitable, you need to be better than average --- which leads to the importance of benchmarking

38

2003 Harvest Year Report for USCHI's Custom Harvester Analysis and Management Program (CHAMP)

Kevin Dhuyvetter and Terry Kastens
Agricultural Economists
AgAnalysis+ and
Kansas State University

email: kdhuyvet@aganalysisplus.com
tkastens@aganalysisplus.com

U.S. Custom Harvesters Inc.

39

Development of CHAMP

- **Developed for two primary reasons**
 - A service for individual harvesters to assist them with financial analysis of their operations (i.e., management aspect)
 - Develop benchmark data pertaining to the custom harvesting industry that can be used in lobbying efforts (i.e., policy aspect)
- **Several individuals were instrumental in getting program started (i.e., somebody had to be the “first”)**

CHAMP: Over the years . . .

- Participation 97-03: 43, 25, 25, 23, 20, 24, 21
 - One forage harvester last two years (02 & 03)
- Repeat members
 - 20 of 21 2003 members participated in 2002
 - 10 members have participated all 7 years
- Continually seek ways to improve analysis
 - Learning curve associated with filling out forms
 - Better understanding of economic principles
 - Prior year asset values and balance sheet

41

On average, custom harvesters have not been making a fortune

42

2003 harvest year results

43

2003 harvest year results

44

2003 harvest year results

Source: CHAMP Results, 1997-2003

Considerable variability between top and bottom third operators

47

Considerable variability between top and bottom third operators

48

Some General Conclusions

- **Considerable variability between firms**
 - 17 of 21 firms were profitable in 2003
 - (6/21 in 2002; 11/20 in 2001; 9/22 in 2000)
- **Have not seen a strong relationship between profitability and age of equipment**
- **We have seen different management styles be successful (e.g., high vs. low hours, new vs. used equipment) indicating need for producers to recognize their strengths and weaknesses.**

49

What do CHAMP participants have to do and what do they get in return?

- **They have to**
 - Fill out forms
 - Pay their share of cost
- **They get**
 - Report of their results comparing them to average (tables and graphs)
 - One-on-one consultation at USCHI annual convention (15-30 minutes)
 - Follow-up help as needed

50

CHAMP fees background

- **Cost of program**
 - 1997 (free)
 - 1998-99
 - \$150/participant – ½ by USCHI and ½ by participant
 - Starting with 2000 harvest year
 - John Deere has contributed a flat rate of \$8,700/year
 - USCHI contributes \$75/participant/year
 - Individual participant pays \$150/year

Return on Equity (based on BS)	9.4%	xxx	Change in balance sheet equity divided by beginning of year equity.								
Expense/\$100 Revenue	\$92.52	\$88.87									
* Value used per acre for Total Fields Harvested represents the average field size in acres.											
Note: Some reported values were modified from those reported on the survey due to arithmetic and other data entry errors.											

BALANCE SHEETS PAGE (schedule D)										Happy Harvesters Inc. Box 999 Wheat Country, KS 99999	
Balance sheet for custom harvesting business only, 2003 (read the footnotes)											
ASSETS (market value)					LIABILITIES & OWNER EQUITY						
	beginning	end			beginning	end					
	01/01/03	12/31/03			01/01/03	12/31/03					
	\$	\$			\$	\$					
Current Assets			Current Liabilities								
Cash on hand & in checking	4,600	6,850	Accounts payable	1,200	2,200						
Savings, bonds, stocks, etc.	14,300	15,800	Short term loans (due within 1 yr.)								
Accounts receivable	2,800	3,600	principal outstanding	15,300	12,750						
Supply inventories	3,600	4,500	accrued interest	377	314						
Other current assets (specify)	0	0	Other current liabilities (specify)	0	0						
D1. TOTAL CURRENT ASSETS	25,300	30,750	D4. TOTAL CURRENT LIABILITIES	16,877	15,264						
Non-current Assets			Non-current Liabilities								
Combines (from A1+B1, A2+B2)	503,000	437,350	Long term loans (due beyond 1 yr.)								
Non-combine equipment (from C1, C2)	315,000	289,800	principal outstanding	305,000	295,000						
Market value of business real estate (i.e., office, storage bldgs., etc.)	45,000	50,000	accrued interest	2,820	2,728						
			Other non-current liabilities (specify)	0	0						
D2. TOTAL NON-CURRENT ASSETS	863,000	777,150	D5. TOTAL NON-CURRENT LIABILITIES	307,820	297,728						
D3. TOTAL CUST. HARV. ASSETS (D1+D2)	888,300	807,900	D6. TOTAL CUST. HARV. LIABILITIES (D4+D5)	324,697	312,992						
			D7. TOTAL CUST. HARV. NET WORTH (D3-D6)	563,603	494,908						
			Change in equity ==>	(68,695)							
TOTAL EQUITY (custom harvesting and outside businesses)											
					01/01/03	12/31/03					
Investments in other businesses (such as a farm) and non-business investments (such as your residence). Report only the NET investment, which is assets less liabilities (net worth), for these investments:					D8. 120,000	130,000					
Overall equity or net worth for whole business (D7+D8)					D9. 683,603	624,908					
					Change in equity ==>	(58,695)					
In balance sheet above, except for D8 and D9, values are those assigned to ONLY the CUSTOM HARVESTING BUSINESS. If you run multiple businesses within your overall business, without tracking assets and liabilities accordingly, you will need to prorate proper values to the custom harvesting business. All values are market values, not income tax basis values.											

Historical Trends of Key Variables – Individual harvester vs survey average

Historical Trends of Key Variables – Individual harvester vs survey average

Example of analysis based upon request from individual

57

Example of analysis based upon request from individual

58

How are individual harvesters using their CHAMP information ...

- **Benchmarking**
 - Compared to other harvesters
 - Compared to themselves over time
- **Communicating with their customers**
- **Communicating with their lenders**
- **To make management decisions**

59

What would you think of this harvester?

60

What would you think of this harvester?

61

Where is this industry headed?

62

What is the future of this harvester?

63

What is the future of this harvester?

64

How is USCHI using the CHAMP information ...

“This compensation was only brought to fruition through the combined efforts of the US Custom Harvesters and the reliable and provable numbers gleaned from the CHAMP program.”

Tim Baker, USCHI operations manager, referring to the Karnal Bunt compensation that was finally approved by USDA (January 2005 issue of Harvest News).

65

Future of CHAMP

- **Forage harvesters**
- **Software compatibility**
- **Spreadsheets**
- **Survey forms**

- **Need for program of this type?**
- **Free rider problem**

Machinery Decision Tools at www.agmanager.info

OwnCombine.xls

OwnBaler.xls

OwnSpray.xls

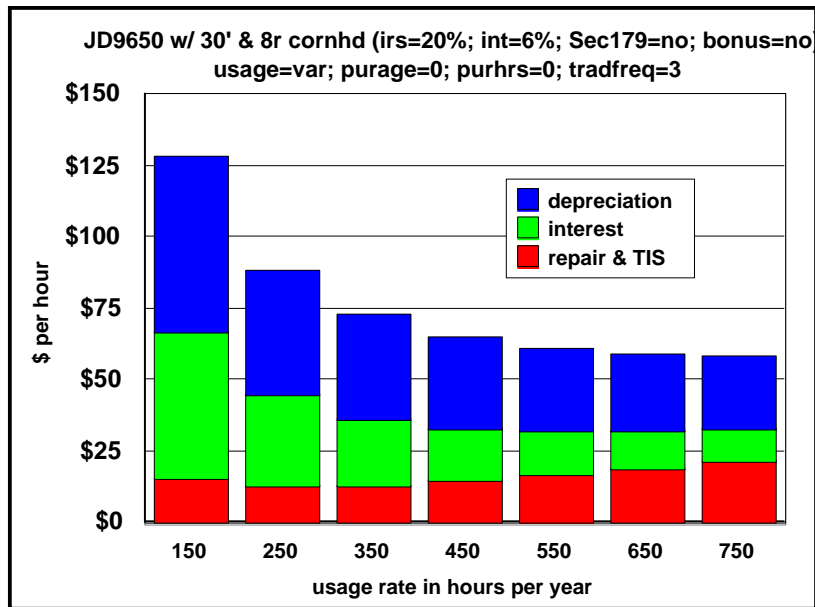

KSU-MachCost.xls

OwnTractor.xls

OwnCombine.xls

Putting on more hours per year really pays off.

OwnBaler.xls

Cost for whole baling operation, various balers

Matches approximately with custom rates in the 1500-2000 T/year range.

OwnBaler.xls

Cost for whole round baling operation (twine)

Costs seem high for this small (typical) hay operation starting with a new baler, but, really, sort of like Beaton's research showed.

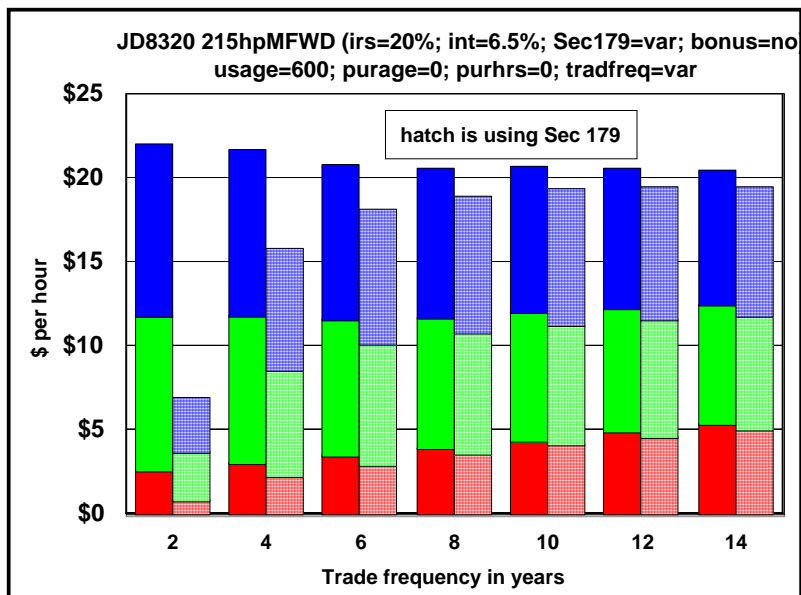

OwnSpray.xls

Efficiency of sprayer use has a big impact on cost

73

OwnTractor.xls

With and w/o Sec 179 on buying a new tractor – difference driven by time held.
Do you have sufficient taxable income?

74

75

76

77

78

2003 \$/ton: Big square (\$12.41); Big round w/twine (\$9.27); w/ net wrap (\$10.52) 79

Net wrap costs about \$1/bale more (or hay producers willing to pay \$1 more) 80

Inflation has been rising faster than machinery costs

Just for comparison purposes. . .
