

# Historical and Projected Kansas Feedlot Net Returns

December 2014

Glynn T. Tonsor (Kansas State University)

This article presents estimated net returns of cattle finishing operations as of December 7, 2014. The calculation and projection process was updated in July of 2012.<sup>1</sup> This process reflects a cash market situation without price risk management strategies being implemented. Each month updates are made to reflect the most recent feedlot closeout estimates and to reflect current market conditions.

## Close-out Calculations

The most recent *Focus on Feedlots* survey provides information on lots closed out in October of 2014. As shown in figures 1 and 2, steers and heifers were estimated to be sold in October at profits (\$260.43/hd) and (\$170.77/hd), respectively. This marks the tenth consecutive month with estimated profits exceeding \$125/steer which is the only such sequence on record.

## Projected Returns

Given the one-month lag in *Focus on Feedlots* survey information, market information is available for November of 2014 but realized animal performance data are not yet available. Currently, the net returns projected for closeouts in November are \$159.12/hd and \$221.98/hd for steers and heifers, respectively (tables 1 and 2). Tables 1 and 2 also present projected net returns for closeouts over the next five months based on forecasts of both animal performance and market prices. These tables also include the projected and breakeven values for cattle prices and cost of gain which provide further insight into the sensitivity underlying these projections. Producers are encouraged to carefully compare their own costs and prices with those reported here. The projections suggest returns are expected to fall substantially from recent levels, primarily reflecting ongoing increases in feeder cattle placement prices and a lack of offsetting fed cattle price increases. Finally, historical and breakeven values are provided in chart format revealing trends over time in fed cattle sales prices (figures 3 and 4), cost of gain (figures 5 and 6), and feeder cattle purchase prices (figures 7 and 8).

---

<sup>1</sup> A document describing the specific approach taken in these calculations and projections is available at: <http://www.agmanager.info/livestock/marketing/outlook/newsletters/FinishingReturns/default.asp>.

**Table 1. Projected Values for Finishing Steers in Kansas Feedyards\***

Closeout Mo-Yr	Net Return	FCOG**	Fed Price	Feeder Price	Breakeven FCOG**	Breakeven Fed Price	Breakeven Feeder Price
Nov-14	159.12	87.21	170.59	204.41	115.37	159.19	223.56
Dec-14	58.56	86.40	161.85	208.07	95.73	157.81	215.20
